

# Curso de Desarrollo

**Dynamics 365 Business Central**

*ClipDynamics*

# Web Services

Dynamics NAV puede publicar WebServices utilizando distintos protocolos:

- SOAP (Simple Object Access Protocol)
- OData (Open Data Protocol)

# Web Services

Dynamics NAV puede publicar como WebServices los siguientes objetos

- Codeunits
- Pages
- Queries

# Web Services

Para poder utilizar Web Services, deben estar habilitados

BC140 - (Running)

General	BC140	^
Database		^
Client Services	7046	^
SOAP Services		^
Enable SOAP Services:	<input checked="" type="checkbox"/>	Port: 7047
Enable SSL:	<input type="checkbox"/>	SOAP Base URL:
Max Message Size:	1024	
OData Services		
API Maximum Number of Notifications:	100	Enable OData Services: <input checked="" type="checkbox"/>
API Maximum Number of Subscriptions:	200	Enable SSL: <input type="checkbox"/>
API Subscription Delay Time:	30000	Enable V3 Endpoint: <input checked="" type="checkbox"/>
		Enable V4 Endpoint: <input checked="" type="checkbox"/>

# Web Services

Field	Remarks
<b>Object Type</b>	Specifies the type of the object to expose as a web service. You can select from Codeunit, Page, and Query options.
<b>Object ID</b>	Specifies the ID of the object to expose. You can enter the ID manually, or select it from the drop-down list.
<b>Service Name</b>	Specifies the name of the web service that is created for the specified object. The service name is visible to consumers of the web service and is used for identifying and distinguishing web services.
<b>Published</b>	Specifies whether the web service is available to serve the requests. The service is available immediately when you select this check box.

# Web Services SOAP

Los Web Services SOAP son creados por los siguientes tipos de objetos:

- Páginas
- Codeunits

# Web Services SOAP

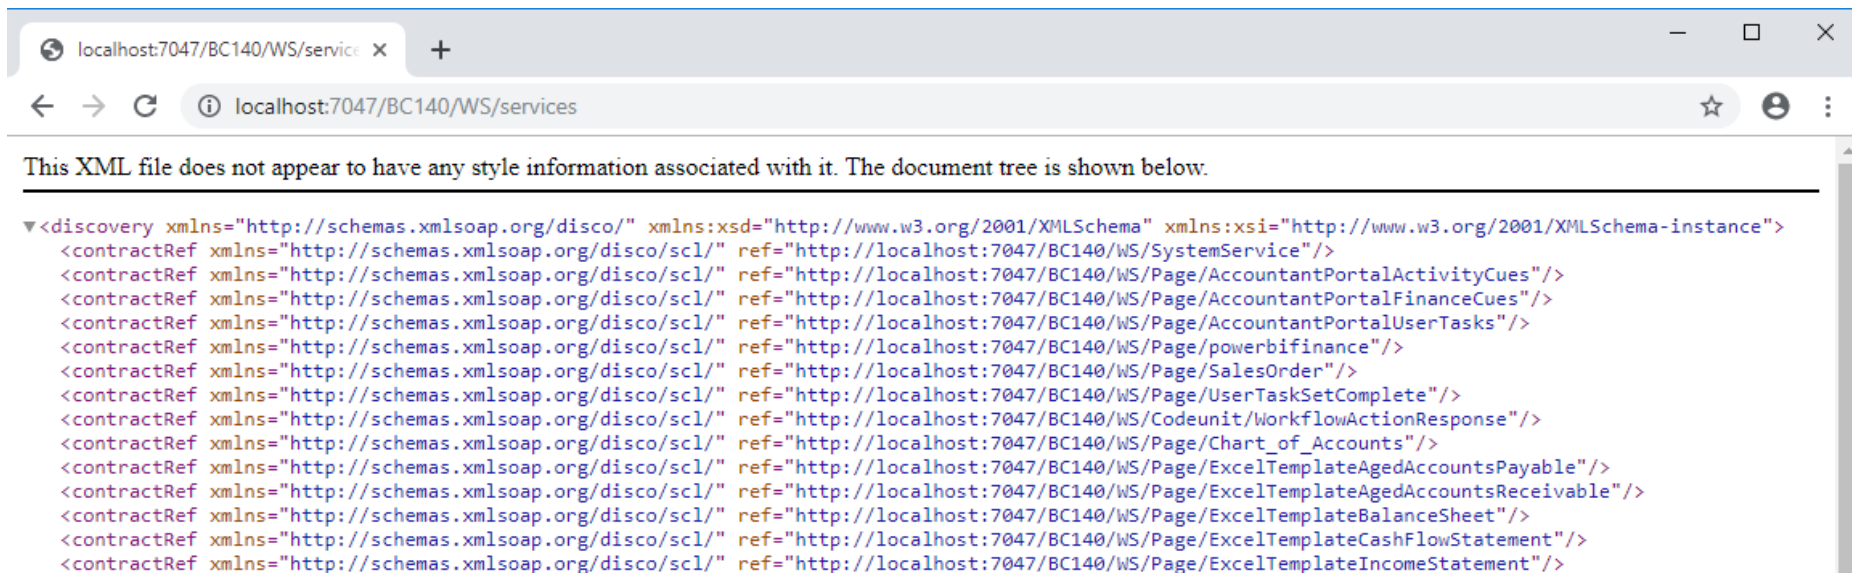

Para acceder a todos los Servicios SOAP publicados en una instancia:

`http://<Server>:<Port>/<ServerInstance>/WS/<CompanyName>/services`

\*<CompanyName> es opcional

# Web Services SOAP

The screenshot shows a web browser window with the address bar displaying 'localhost:7047/BC140/WS/service'. The page content indicates that the XML file does not have any style information associated with it and shows the document tree below. The XML tree is a <discovery> element with several attributes (xmlns, xmlns:xsd, xmlns:xsi) and a series of <contractRef> elements, each pointing to a specific web service endpoint.

This XML file does not appear to have any style information associated with it. The document tree is shown below.

```
<discovery xmlns="http://schemas.xmlsoap.org/disco/" xmlns:xsd="http://www.w3.org/2001/XMLSchema" xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance">
  <contractRef xmlns="http://schemas.xmlsoap.org/disco/scl/" ref="http://localhost:7047/BC140/WS/SystemService"/>
  <contractRef xmlns="http://schemas.xmlsoap.org/disco/scl/" ref="http://localhost:7047/BC140/WS/Page/AccountantPortalActivityCues"/>
  <contractRef xmlns="http://schemas.xmlsoap.org/disco/scl/" ref="http://localhost:7047/BC140/WS/Page/AccountantPortalFinanceCues"/>
  <contractRef xmlns="http://schemas.xmlsoap.org/disco/scl/" ref="http://localhost:7047/BC140/WS/Page/AccountantPortalUserTasks"/>
